

Project Overview

This project focuses on analyzing the most used internet features in May 2026 using Microsoft Excel. The analysis explores user engagement trends across social media, messaging platforms, streaming services, AI tools, online shopping, and digital communication platforms.

Project Objectives

- Analyze the most used internet features in May 2026
- Identify user engagement trends across platforms
- Track feature popularity among different user groups
- Create interactive dashboards and visual reports
- Generate insights and recommendations based on internet usage patterns

Tools Used

- Microsoft Excel
- Pivot Tables
- Charts and Graphs
- Conditional Formatting
- Data Cleaning Techniques

Key Features

- Internet usage summary dashboard
- Social media feature analysis
- AI tools and chatbot usage analysis
- Streaming and messaging trends tracking
- Online shopping and digital payment analysis

Current Status

The recommendation and prediction section is still being improved and updated with deeper internet usage insights.

What I Learned

- Data cleaning and preparation in Excel
- Dashboard creation and visualization
- Trend analysis and interpretation
- Organizing large datasets for analysis
- Creating user-focused analytical reports

Future Improvements

- Add advanced recommendation systems
- Improve dashboard design and interactivity
- Add automated calculations and formulas
- Expand analysis depth with predictive insights
- Integrate real-time internet trend tracking
